Access One Expands Product Offering with Dyversaband™.

Chicago, IL – November 5, 2007– Access One, Inc., Chicago based telecommunications provider, recently launched VOIP based Integrated service through their Direct network.

On October 17th, Access One successfully rolled out Dyversaband™, a dynamically allocated integrated circuit on their Direct network. Dyversaband™ provides customers with a solution that will dynamically allocate bandwidth between voice and data, giving priority to voice. Dyversaband™ is exclusively available in Chicago, Illinois LATA 358. Capabilities include bonding T1 circuits up to 4.5M through diverse paths and voice compression allowing up to 2 ½ times the calls of a traditional voice circuit. Customers can utilize their legacy equipment and run both DIDs and analog lines, including fax and alarm lines on Dyversaband™. The product provides customers with a convenient, effective, and flexible solution to their current and future voice and data needs.

Access One also expands their dynamic offering in California through Telepacific Communications. Their offering includes analog, Centrex, Digital and PRI.

Founded in 1993, Access One, Inc. is an industry leading telecommunications provider that specializes in local and long distance voice, data and Internet. Access One provides service to small and medium size businesses with a focus on the Midwest region. The company boasts one of the highest customer retention rates in the industry, with an attrition rate of less than one percent. For further information, visit the Access One website at <http://www.accessoneinc.com>.
