

SiPSuite Services

Network Intelligence, an Enhanced Solutions provider, has created **SiPSuite** services. **SiPSuite** is a family of SIP based Managed Network Services, designed to respond to the needs of Resellers and Master Agents. **Network Intelligence** performs the necessary technical and operational tasks needed to operate a fully-featured IP telecommunications infrastructure on an outsourced basis.

SiPSuite from **Network Intelligence** provides an economic and operational alternative to owning and operating your own network. Little or no capital investment is required, and significant operational savings are realized by outsourcing the network operations to an experienced and professional staff. Let **Network Intelligence** operate the network so you can focus on your core business and strengths.

Many Resellers and Master Agents have SIP products tied directly to individual carriers but do not have the resources or expertise in-house required to be able to combine multi-carrier services into a monolithic and highly customized product.

When a reseller uses an individual carrier's SIP services, it is not possible to select the least cost or highest quality route from among multiple carriers. It is an all-or-nothing proposition. In addition, it is difficult to differentiate your product from your competitors when the only distinguishing feature is price.

SiPSuite Services

SiPTrunk

Nationwide Termination or 1+, 8xx and DID Traffic.

SiPTandem

Access Tandem Features

SiProxy

Separates signaling and media.

SiPartition

Dedicated Softswitch Partition supporting SiPSuite Services

Visibility to CDRs

SiPSecurity

Session Border Control

SiPSupport

Architectural and Operational

Benefits to **SiPSuite Services**

- Reseller or Master Agent can offer SIP products without substantial capital expenditure or increase in employee headcount.
- **Network Intelligence** manages all operational aspects of providing SIP-based Carrier Services.
- **Network Intelligence** provides Product development, Sales Support and Training.
 - Custom Dial Plans
 - LCR analysis and Reseller Branded Rate Decks
- Least Cost Routing is shared across multiple carriers to deliver competitive and profitable rates.
- Reseller's or Agent's time to revenue is dramatically improved.
 - Interop and carrier turnup takes hours not weeks.
 - Product development can be customized to fit customer needs.
- Small users can be bundled together to achieve volume discounts
- Inter-network calls can be completed with low latency and extremely low cost, enabling low-cost inter-office IP calling plans.
- The Reseller's network topology is concealed from the rest of the network; your customers are not exposed to your competitors.
- Carrier Contracts and Peering arrangements are managed on a hub and spoke basis, rather than a complex web of individual peering agreements. This saves a huge amount of time, money, and effort.
- The Reseller can sell managed services to the End User for Configuration Management and Performance Monitoring, enabling large customers to have pre-defined routing control of their own traffic without a call to the reseller.
